ABOVE AND BEYOND

Whether you need an affordable display for general business or a high-performance solution for specialised work, there’s an HP business flat panel monitor that meets your needs. With outstanding colour and clarity, thoughtfully designed and innovative features, the choice is clear: HP monitors are the right solutions to help your business improve productivity and provide a superior user experience.

See it all more clearly
The expanded family of HP high-resolution widescreen monitors provides more viewing area for large images and helps users spend less time scrolling or toggling between applications.

Expand your view
Multiple monitors help businesses improve productivity. Users can keep up with e-mail and day-to-day business on one screen while moving forward with strategic projects on another. Or they can tile multiple units together for a seamless panoramic display.

Make the most of your workspace
Sleek flat panel displays just take up less desk space than other models, and are easier to move between offices, too. Wall or swing-arm mounting is useful for space-constrained environments.

Protect your investment
With new theft-deterrent software features, support for Kensington locks and speakers integrated into some of our monitor designs, you can worry less about hardware disappearing.

Get comfortable
Different users need different monitor settings. Our adjustable monitors make it easy to find the right fit – so there’s no need to lean back, hunch forward or turn your head to the side. Flicker-free screens and anti-glare coatings help reduce eyestrain.

Enjoy ease of use
HP Display Assistant lets you easily adjust panel brightness, contrast ratio, colour temperature and more. The theft deterrence feature of HP Display Assistant reinforces the security of your monitor by linking it up to your desktop, workstation or notebook with a PIN. Pivot Pro software provides support for 90-degree portrait and landscape views.  

Rely on our support
With HP Care Packs, you can ensure your new monitor will always be covered in case of a problem.

A COLOUR EXPLOSION

Imagine a colour, any colour. Guess what? If you can imagine it, the new HP DreamColor LP2480zx can reproduce it. Accurately. Over and over again.

Developed in close collaboration with DreamWorks Animation, the 61 cm (24") LP2480zx is the world’s only LCD based on the HP DreamColor Engine. This innovative technology gives graphics-intensive users a billion colour possibilities, colour accuracy from vision to production and breakthrough colour control! As part of the HP Performance series of displays, the LP2480zx gives you the confidence to match the toughest colours – even when you’re working with collaborators across the globe – with exact-colour certainty.

• Get accurate colour and tone response, reducing expensive and unnecessary time and money cycles.
• The 30-bit panel displays over 1 billion colours, enabling smoother colour transitions and virtually eliminating contouring artefacts.
• The LP2480zx display can synchronise to all the standard video frame rates, ensuring that the image on the screen is updated exactly in sync with the video source.

Energy-saving tip:
Set your TFT brightness to approximately 250 units for significant energy savings without compromising your visualisation experience!
